Drive Systems

Seminar No. 272 ProWind and MD2000

Course Description:

This course covers the fundamentals of 3-phase technology with a constant voltage link circuit as well as the ProWind and MD2000 operating principles in wind power units. Participant teams will work together to find faults, do troubleshooting and re-commissioning, and use the PC Drive software.

Learning Outcomes:

Independent commissioning and fault finding

Prerequisites:

Use of a PC
Knowledge of 3-phase technology and asynchronous machines

Participants:

Electrical personnel for service, commissioning and maintenance on WPU

Duration:

Five days
