

Energizing People > Powering the future

Drive Systems

## Seminar No. 275 LV5 (ProSolar)

### Course Description:

This program introduces the basic principles of converter operation. Participants will learn about converter structure and hardware components, HDM basic principles (such as handling, operational characteristics, maintenance, and safety), HPCi Data Manager, and fault detection and diagnosis.

### Learning Outcomes:

Handling, Diagnostics, Maintenance

### Prerequisites:

Electrical education  
Knowledge of 3-phase technology and solar generators  
Use of a PC

### Participants:

Electrical personnel for service, commissioning and maintenance on solar systems

### Duration:

Four days
