Course Description:
This Synchronous POD Motor course provides insight on the architecture and technology used aboard your Electrical Propulsion System (EPS). Additionally, it covers system configuration and setup as well as the POD sub-equipment and operating system.

Learning Outcomes:
Course participants will be introduced to electrical drive, control, automation, network, HMI, motor, and POD operation.

Prerequisites:
Basic knowledge of electrical engineering and electronics; use of a personal computer

Participants:
From junior to expert level

Duration:
4 days
