Course Description:
This course covers the fundamentals of 3-phase technology with a constant voltage link circuit as well as the ProWind and MD2000 operating principles in wind power units. Participant teams will work together to find faults, do troubleshooting and re-commissioning, and use the PC Drive software.

Learning Outcomes:
Independent commissioning and fault finding

Prerequisites:
Use of a PC
Knowledge of 3-phase technology and asynchronous machines

Participants:
Electrical personnel for service, commissioning and maintenance on WPU

Duration:
Five days

“Well-structured training in a great facility”
– Martin Matousu, Nordex
